

Submission of AI-Based Project Proposal

All groups are required to submit a formal project proposal for an AI-based software solution addressing a real-world challenge aligned with the Sustainable Development Goals (SDGs) in Bangladesh. You can have a look at the SDGs from their website <https://bangladesh.un.org/en/sdgs>.

Your proposal may be large enough to make a complete solution. You do not need to implement the entire one in our course. You have to implement a pilot part of that proposal in our course. The rest will be implemented later if you want (not part of course assessment).

Proposal Requirements

Each proposal must be structured as a formal document and include the **Project Title** and the following sections:

Introduction & Problem Statement

Clearly describe the existing problem in Bangladesh and justify why it requires attention.

Motivation & Rationale

Explain the importance of solving this problem and the value of using AI-driven techniques.

Background Study / Related Works

Summarize relevant research, existing solutions, or industry practices, highlighting gaps your project will address.

Proposed Solution & Technical Methodology

Describe your AI model or approach, system design, technical workflow, datasets, and tools or frameworks you intend to use.

Scope and Pilot Implementation

Define the functional and non-functional goals of the project. Then explain the project's scope. Provide a plan for implementing the pilot part in this course.

Budget & Resource Plan

Provide estimated costs and list required software, hardware, data collection, data preprocessing, environment setup, AI models services, cloud services, human hours (salary), development cost, testing cost, or all other costs.

Impact on Society

The social, economic, or environmental benefits expected from your project. **Alignment with Sustainable Development Goals (SDGs)** Identify the specific SDG(s) your solution supports and explain how. **Revenue Plan**

How can your project earn revenue? What is your project's sustainable plan? **Expected**

Outcomes and Deliverable

Features, outputs, and technical results of your solution.

Proposals will be assessed based on: Clarity and coherence

Technical feasibility and innovation

Appropriate use of AI methodologies

Strength of SDG alignment

Quality of planning, analysis, and budget

Marking Rubric:

Each section in the proposal document has two (2) points and a total of 20 points.

Submission Deadline: August 8, 2026

Proposal Presentation: August 11, 2026

Students are encouraged to propose ideas that are innovative, practical, and capable of generating meaningful social impact in Bangladesh. Do not propose a typical, straightforward solution; rather, try to write something out of the box.
